Bola

Say it. Bin it.

A voice at the IIT Roorkee mess door.
It names the bin, then shortens the morning round.

Mixed waste starts at the hand

01

The throw

A plate, a bottle, and a wrapper land in one bin.

02

The truck

The loop still stops where the bin is half empty.

03

The sign

A sticker is easy to miss when the mess is loud.

04

The gap

Nobody can say what stayed out of the mixed pile.

Three moves, then you are done

01

Say it

Hindi or English. One phrase is enough.

02

Name the bin

Six answers. The line you hear is one sentence.

03

Cut the loop

Skip bins under 75%. Visit the rest nearest-first.

Six bins, each a short line

Wet

Geela. Green bin.

Dry

Sukha. Blue bin.

Reject

Reject bin.

E-waste

E-waste. Alag rakhna.

Hazard

Hazard. Mat milao.

Sanitary

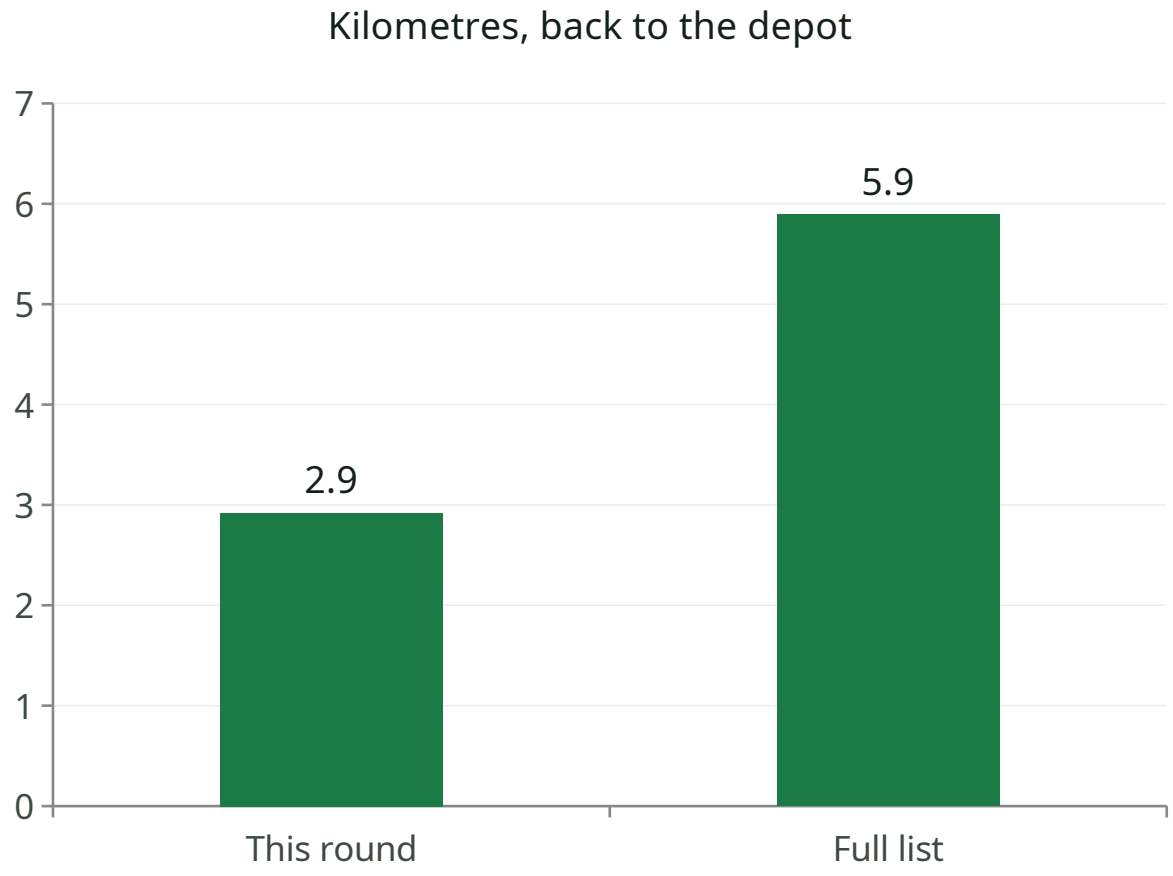

Sanitary. Alag bin.

Eight stops, not fifteen

2.9 km this round

5.9 km if every bin is visited

3.0 km saved

A spoken line, then a job

ElevenLabs

Geela. Green bin.

Hindi or English in. One short line out. The sort is a word list, so the bin still shows if the voice key is missing.

Render Workflows

Score every bin.
Then order the truck.

planRound fans out scoreBin, one run per hostel. The page uses the same round locally if Render is quiet.

A target, not a count we took

227

kg a day kept recyclable

3.0

km off each round

144

litres a year, if it holds

8,000 people, 0.3 kg each, 35% recyclable. If contamination moves from 45% to 18%, the gap is about 227 kg a day. Fill levels on the map are demo data. The kilometres are from those coordinates, not a logged trip.

Try these four

leftover rice	Wet
plastic bottle aur charger	Dry, then e-waste
chips packet	Reject
dawai ki strip	Hazard

Then open Round.

Say it.
Bin it.
